

## **Year In Space: 1,000 Photos From The International Space Station**

Astronaut Scott Kelly spent a year on the International Space Station. During that time, he took (and tweeted) 1,000 awe inspiring photos from the space station. Now you can see them all in one place. There are also photo galleries of images taken by other astronauts. You can check out the All Photos category, or browse by Day, Night, Sunrise Sunset, Aurora, Moon and Space Station.

In Scott's gallery, every category has a current Top 10, and a map showing where the images were taken. Clicking on map icons brings up a thumbnail of the photo taken at that location. Icons with numbers indicate more than one photo from that location - click on it and icons for each photo will become visible.
